

Game Premise:

[Openfront.io](#) / [Territorial.io](#) but with provinces and a more complex battle system. This requires more strategy, planning, and in depth analysis and multitasking. Each game also takes longer. This is also supposed to be more historically accurate, where you can play as existing countries. Based on Call of War

Resources:

Gold:

- Used to build certain buildings
- Produced by [Goldfield](#)
- Can be obtained in the [market](#)

Metal:

- Used to build certain buildings
- Produced by [Mine](#)
- Can be obtained in the [market](#)

Cash:

- Used to build certain buildings
- Used to produce troops (tanks, anti vehicles, ships, airplanes)
- Used to buy/sell goods at the [marketplace](#)
- Produced automatically depending on your [population](#)
- Can be obtained in the [market](#)
- Produced by [cities](#)

Oil:

- Used to produce troops
- Produced by [oil refinery](#)
- Can be obtained in the [market](#)

Wheat (food):

- Automatically used to feed the population every 30 seconds. If not enough wheat, the population will go down.
- More population = more wheat needed
- Used to produce troops ([infantry](#))
- Produced by [farms](#)

- Can be obtained in the market

Population/Manpower:

- Increased by cities

Pros

- More population = **X%** productivity buffs to all buildings
- More population = **X%** faster troop production for tanks, anti vehicles, ships, airplanes
-

Cons

- More population = Higher wheat quota
- More population = Higher morale quota

Morale (Happiness):

- Increased by cultural sites

Pros

- High morale (above quota) = **X%** productivity buffs to all buildings
- High morale (above quota) = **X%** faster troop production for infantry
-
- More population = higher morale quota
- Low morale (below quota) = More likely chance of rebellions

In essence...

More population/manpower = more power (allowing you to produce more resources), but it also means you need a larger supply of morale and food.

Tech Points (TP):

- Currency in the Technology tree feature.
- Earned cumulatively (1 per minute) and through doing quests

Quests:

- 3 quests per are shown every 5 minutes. Once you finish them all, the user will have to wait 5 minutes until they refresh. Quests reward 2 TP per completion. Quests may include but are not limited to acquiring X of a certain resource, constructing X building(s), or paying X of a certain resource.

Marketplace:

Two types of market:

Stock market: Simple live stock market simulation where the user has the choice to invest cash on in-game stocks of 5 companies. Each company has random stocks that go up or down each minute, similar to Neal.fun I'm not a robot Level 28.

- General Motors

- Coca-Cola
- IBM
- US steel company
- Shell

Marketplace: Places that offer trades with any of the following

- Gold
- Metal
- Cash
- Oil
- Wheat

A user can either accept trades from the marketplace or create one of their own (and pay a small tax). Example trades from the marketplace are shown below

2000 Gold for 1500 Metal

1000 Cash for 500 Wheat

Users cannot accept trades from nations that are at war with them.

Technology tree:

- In construction

Buildings:

All buildings are from level 1 to level 5. All buildings start at level 1 at the start of the game. The user must unlock the next level of a building in the Tech Tree in order to level it up to the next level (upgrade costs are separate). Each level increases significantly in production level and power. Every building costs population and cash.

Goldfield: Generates gold passively

City: Generates cash and increases population

Mine: Generates metal passively

Oil Refinery: Generates oil passively

Farm: Generates wheat passively

Cultural Site: Increases morale

Defence post: Any unit/troops *IN* the defence post take only 50% of incoming damage from infantry, tanks, ships (EXCEPT air troops) and have 200% range. At level 3, a certain circular area around the defence posts can detect stealth jets.

Training Camp: Produces infantry

Ordinance Factory: Produces anti-vehicles

Tank Factory: Produces tanks

Harbor: Produces ships

Airs factory: Produces planes

Silo: Produces missiles

Troops:

All troops are from level 1 to level 5 (except missiles). All troops start at level 1 at the start of the game. The user must unlock the next level of a troop in the Tech Tree in order to level it up to the next level (upgrade costs are separate). Each level increases the troop's stats and powers significantly. Every troop will cost differently. The final level of a troop (level 5) will grant it special abilities/incredible stat increases.

In general, Infantry beats Anti-vehicles, AVs beat tanks, tanks beat infantry.

An exception is the lightly armored car, which beats infantry but loses against tanks.

Anti-vehicles can beat all classes depending on the type, including ships and planes

Planes and ships are neutral against each other, but ships have more HP

Infantry:

- Weak to tanks, ships, and planes, Strong against anti-vehicles

- Overall relatively cheap with strong stats across the board.
- Default troops
- Jack of all trades in speed and range
- Cannot hit air troops and ships

1) Local militia/Commandos:

- Cheap to make
- Weak/Early Game
- Best in jungle and swamps. (+50% DMG)
- Weak in plains and cities (-50% DMG)
- Low range (Special ability: +50% range buff in jungle and swamps)
- Medium speed
- **Strong against** All anti-vehicles except for armored car (+50% DMG)
- **Weak against** All tanks, armored car, and special forces (-50% DMG)

2) Soldier:

- More expensive than commandos, but still cheaper with higher stats
- Jack of all trades
- Best in cities (Special ability: Take 25% less damage in cities) (+50% DMG)
- Weak in plains (-50% DMG)
- Medium range
- Medium speed
- **Strong against** All anti-vehicles except for armored car (+50% DMG)
- **Weak against** All tanks, armored car, and special forces (-50% DMG)

3) Elites/Special forces:

- Most expensive infantry
- Extremely high stats (especially damage)
- Best in mountains, jungle, and swamp (+50% DMG)
- Special ability: Invisible to all troops except other Special Forces in mountain, jungle, and swamp until it attacks
- Weak in plains and cities (-50% DMG)
- Low range
- Fast speed
- **Strong against** soldier, local militia, anti-air, and all anti-vehicles except for armored car (+50% DMG)
- **Weak against** All tanks and armoured car (-50% DMG)

Anti-vehicles:

- Each type of AV deals with another type of troop
- Slow movement except the lightly armored car (fast)

- Low-medium costs

1) Lightly armored car

- Counters infantry
- Slightly worse stats (HP, DMG) than the light tank
- Medium cost
- Best in plains and cities (+50% DMG)
- Weak in swamp and jungle (-50% DMG)
- Medium range
- Fast speed
- Special ability: 25% DMG, 25% HP when grouped/merged with the soldier AND +50% speed in plains
- **Strong against:** All infantry (+50% DMG)
- **Weak against:** All tanks (-50% DMG)

2) Anti Air Vehicles (AAVs)

- Counters air troops
- Low HP, High Damage (against air troops)
- Low-Medium cost
- Best in plains, cities, and mountains (+50% DMG)
- Weak in swamp and jungle (-50% DMG)
- Long range
- Slow speed
- Special ability: (+25% DMG when attacking planes on a defence post)
- **Strong against:** All planes (+50% DMG)
- **Weak against:** All infantry (-50% DMG)

3) Anti Tank Vehicles (ATVs)

- Counters tanks
- Low HP, High Damage (against tanks)
- Low-Medium cost
- Best in plains and cities (+50% DMG)
- Weak in swamps, jungles (-50% DMG)
- Medium range
- Slow speed
- Special ability: +25% HP while on a defence post
- **Strong against:** All tanks (+50% DMG)
- **Weak against:** All infantry (-50% DMG)

4) Artillery Missile Launchers

- Counters ships
- Decent DMG and HP
- High cost
- Best in cities and mountains (+50% DMG)

- Weak in plains (-50% DMG)
- Extremely long range
- Slow speed
- Special ability: Take 50% less DMG on mountains
- **Strong against:** All ships (+50% DMG)
- **Weak against:** All infantry and all planes (-50% DMG)

Tanks:

- Does well against infantry, has very high HP

1) Light tank

- "Soldier" of the tank. Jack of all trades.
- Lowest HP and DMG of the tanks
- Medium cost
- Best in plains and cities (+50% DMG)
- Weak in mountains, swamps, and jungles (-50% DMG)
- Medium range
- Medium-Fast speed
- Special ability: +50% speed on plains
- **Strong against:** All infantry and armored car (+50% DMG)
- **Weak against:** Anti tank vehicles (-50% DMG)

2) Medium tank

- Slightly more armored than light tank, more HP and slightly more DMG
- Medium-High cost
- Best in plains and cities (+50% DMG)
- Weak in mountains, swamps, and jungles (-50% DMG)
- Medium range
- Medium speed
- Special ability: +50% DMG when grouped/merged with the heavy tank
- **Strong against:** All infantry and armored car (+50% DMG)
- **Weak against:** Anti tank vehicles (-50% DMG)

3) Heavy tank

- Incredibly tanky (high HP), good DMG. Best unit in the game in terms of stats.
- High cost
- Best in plains and cities (+75% DMG)
- Weak in mountains, swamps, and jungles (-75% DMG)
- Medium range
- Slow speed
- Special ability: +25% HP when it is only by itself
- **Strong against:** All infantry and armored car (+50% DMG)
- **Weak against:** Anti tank vehicles (-50% DMG)

Ships:

1) Aircraft carriers

- Carries up to 4 planes (in the ocean)
- Very low DMG (can only damage planes and ships)
- Fragile, needs to be defended by destroyers
- High cost
- Medium speed
- Extremely long range
- Special ability: take +50% less DMG when near destroyers
- **Weak against:** Artillery Missile Launcher (-50% DMG)

2) Destroyers

- Can deal DMG to land troops, air troops, and sea troops
- Medium cost
- Extremely long range
- Fast speed
- **Weak against:** Artillery Missile Launcher (-50% DMG)

3) Submarines

- Can launch nukes
- Can spy on sea troops and a bit of land troops (land near the coast)/spy on enemy cities/formations/troops
- Has much less HP/DMG than a destroyer, but can take down an aircraft carrier
- Special ability: Can stay invisible (except to other submarines) until it is attacking (can only attack ships)
- Medium cost
- Medium range (sight + attacking range)
- Medium speed
- **Strong against:** Aircraft carrier (+25% DMG)
- **Weak against:** Destroyers(-25% DMG)

Planes:

1) Helicopters

- Special ability: Patrol — Can go into enemy territory and spy on enemy cities/formations/troops in a certain radius.
- Fast speed
- Medium cost
- Best in plains and cities(+25% DMG)
- Weak in mountains, swamps, and jungles (-25% DMG)
- Short range (of attack)
- **Strong against:** Artillery Missile Launcher (+50% DMG)
- **Weak against:** AAVs (-50% DMG)

2) Stealth Jet

- Special ability: Can stay invisible (except to other stealth jets and defence posts lvl 3) until it is attacking
- Decent health and high DMG
- Fast speed
- High cost
- Medium range (of attack)
- **Strong against:** Artillery Missile Launcher (+50% DMG)
- **Weak against:** AAVs (-50% DMG)

Missiles:

1) Bombs

- Medium cost
- Dropped by planes
- Best in plains and cities (+25% DMG)
- Weak in swamps, jungles, and mountains (-25% DMG)
- **Strong against:** Infantry and anti vehicles (+25% DMG)
- **Weak against:** Defence posts (does -25% DMG to anything in the defence post)
- Small radius AOE
- Friendly fire. Can hit your own troops
- Decreases morale by a bit

2) Nukes

- Can only be produced by a level 5 silo
- Extremely high cost
- Dropped by planes or submarines
- Extremely large radius AOE
- Friendly fire. Can hit your own troops
- Decreases morale by a lot
- Insta-kills anything within the radius
- Destroys all buildings within the radius

Battle Mechanics:

Troop Range: Determines how far (the distance) the troop can attack from.

Troop Speed: Determines how fast the troop can move across the map

Encirclement/Tactics: Troops that are encircled gain a 50% debuff to DMG and HP.

Terrain:

- Cities/urban (allows for fast movement)
- Plains (allows for fast movement)
- Mountains (slow movement)
- Jungle (slow movement)
- Swamp (slow movement)

Surveillance/Espionage: Numerous troops are able to spy and/or stay invisible while gathering enemy intel. You cannot see anything in a province that isn't yours unless you use those certain troops. Using these ensures you are able to know your neighbors' plans and their buildings, building locations, troops, and troop location.

You can also pay an extremely large amount of gold to see any nation's provinces (troops, buildings, etc) (all of them) for a short period of time.

Defence posts: Defence posts are a key method to ensure you don't get invaded by another nation. Due to the benefits of defence posts, you can stop a larger army with a smaller army by putting them in defence post(s).

Capitals: Each province has a predetermined capital. If an enemy troop is directly ON the capitol (even with your troops still stationed on the province), the entire province becomes officially theirs. You can also put a building on a capital, and that building will be 2 times more productive and generate +50% more resources.

Province Resource Multipliers: Each province has a certain resource multiplier of X% (Gold, Metal, Cash, Oil, Wheat, Morale) depending on its importance. For instance, if a province has a metal multiplier, building a mine can boost its production by 50%.

Merging troops: You can merge troops into a combined, stronger army. The speed of the merged troop is the average speed of the troops inside it, and the range of the merged troop is separate (they all have separate ranges). It is recommended that you merge troops with the same range.

Maps & Provinces:

The maps will be provided from the website: <https://www.mapchart.net/europe.html>
